## **Oregon Public Health issues advisory for Fairview Lake**

### ***High algae levels found in Multnomah County Fairview Lake***

A health advisory prompted by high algae levels found in Fairview Lake, located 20 miles east of Portland and directly south of Blue Lake, was issued today by Oregon Public Health and Multnomah County Health Department officials.

Water monitoring has confirmed the presence of blue-green algae that can produce toxins harmful to humans and animals. These algae levels are likely to be associated with dangerous toxin concentrations in the water, according to World Health Organization guidelines.

Swallowing or inhaling water droplets should be avoided, as well as skin contact with water by humans or animals.

Drinking water from Fairview Lake is especially dangerous. Oregon Public Health officials advise campers and other Fairview Lake visitors that toxins cannot be removed by boiling, filtering or treating the water with camping style filters.

People who draw in-home water directly from Fairview Lake are advised to use an alternative water source because private treatment systems are not proven effective in removing algae toxins. However, public drinking water systems can reduce algae toxins through proper filtration and disinfection. If people on public water systems have questions about treatment and testing, they should contact their water supplier.

Oregon Public Health recommends that people who choose to eat fish from waters where algae blooms are present should remove all fat, skin and organs before cooking since toxins are more likely to collect in these tissues.

(more)

Additionally, public health officials advise that people should not eat crayfish or freshwater shellfish harvested from Fairview Lake while this advisory is in effect.

Exposure to toxins can produce symptoms of numbness, tingling and dizziness that can lead to difficulty breathing or heart problems and require immediate medical attention. Symptoms of skin irritation, weakness, diarrhea, nausea, cramps and fainting should also receive medical attention if they persist or worsen. Children and pets are particularly susceptible.

The public will be advised when the concern no longer exists.

With proper precautions to avoid water contact, people are encouraged to visit Fairview Lake and enjoy activities such as camping, hiking, biking, picnicking, catch-and-release fishing and bird watching. Boating is safe as long as speeds do not create excessive water spray, which could lead to inhalation risk.

For local information contact John Gessner, Community Development Director for the City of Fairview, at 503-674-6205.

For health information, contact the Harmful Algae Bloom Surveillance program at 971-673-0400 or [www.healthoregon.org/hab](http://www.healthoregon.org/hab); also contact the Oregon Public Health toll-free information line at 1-877-290-6767 or Gerald Barnes, Multnomah County Health Department at 503-988-3400, ext. 26763.
